MPEG2

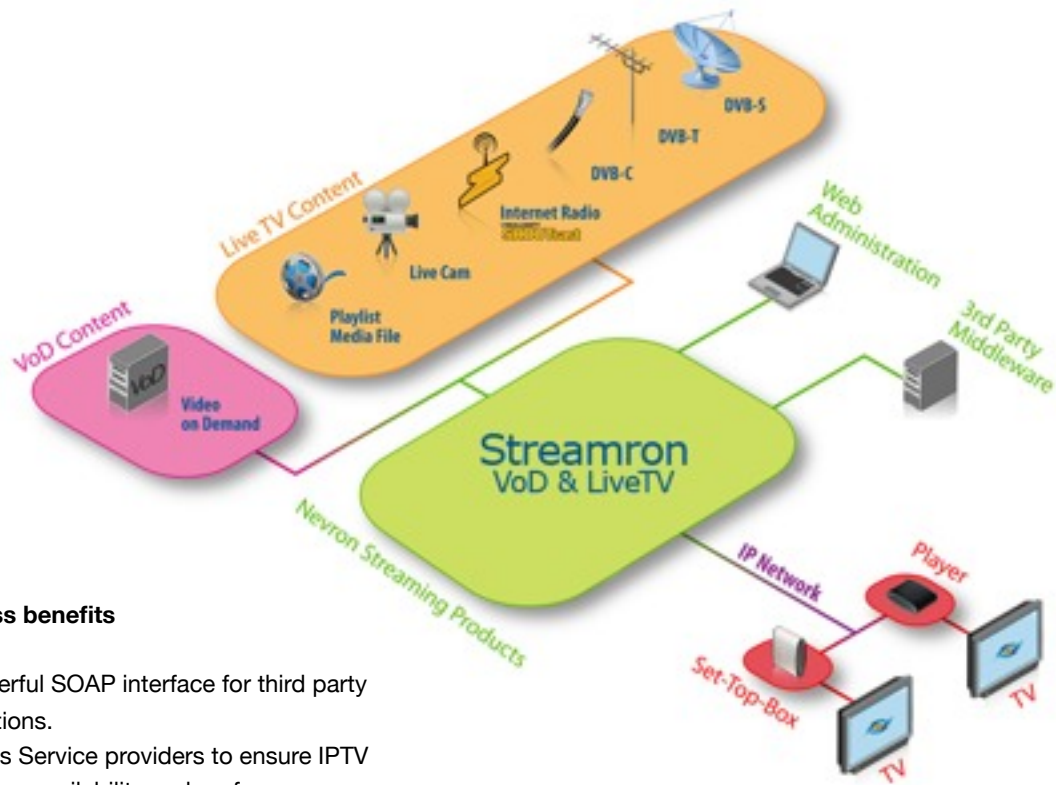

DVB to IP Gateway
SOAP

Streamron is the necessary component of IPTV system responsible for AV streaming over IP. It is a video and audio streaming server for file (NVOD, content on demand) and live streams (linear TV and radio). Its primary purpose is real time audio/video content transmission over IP network.

It can provide network streaming services for multicast live streaming from various input devices (DVB-S, DVB-C, DVB-T, DVB-S2, Analogue receiver) and for multicast and unicast streaming of files. It basically provides streaming services from various input feeds and distributes files to specific digital devices.

STREAMRON - IPTV SOLUTION FOR AUDIO/VIDEO STREAMING

Business benefits

- Powerful SOAP interface for third party solutions.
- Helps Service providers to ensure IPTV service availability and performance.
- Secure and reliable deployment of IPTV infrastructure.
- Fully customizable for future features and services - add new applications to be the market leader tomorrow.
- Reliable and easy-to-manage.
- Cost-effective to deploy.

Key features:

- IPTV encoder.
- DVB gateway.
- Internet radio (SHOUT Cast) gateway.
- Content on Demand Server.

STREAMRON LIVETV SOFTWARE (DVB GATEWAY)

Represents top performance broadcast of Live TV channels and other audio/video content sources.
